

eGreen
ROOF COATINGS

Our Process

1

Roof Cleaning

Thoroughly clean the roof to prepare for priming and waterproofing.

2

Priming

Selection and application of the appropriate primer for your existing roof type.

3

Waterproofing

Careful inspection, analysis and correction of potential roof leak sources.

4

Roof Coating

A thick, seamless elastomeric roof coating is applied by airless sprayer.

ADVANTAGES OF

ROOF COATING SYSTEMS

Maximize Roof Life

All roofs have an expected life cycle...some longer than others. A roof coating will increase the life cycle of your roof by protecting the membrane from UV damage, thermal shock cycles and corrosion.

Stops Leaks

All commercial roofs have seams and penetrations which is where 90% of all leaks occur. Roof coatings create a completely seamless waterproof membrane eliminating the possibility for leaks in these areas.

Save Energy

Due to the highly reflective properties, roof coatings greatly reduce rooftop temperatures allowing less heat transfer into the building. Plus, rooftop air conditioning units run more efficiently because the air temperature surrounding the unit is now cooler.

Whatever your roof type, we've got you covered!

Built-Up • Concrete • Foam • Metal • Modified Bitumen • Single-Ply

BEFORE

AFTER

BEFORE

AFTER

Restore your roof, help save the environment ...

Approximately 11 million tons of asphalt roofing waste ends up in US landfills each year. Discarded roofing comprises about 7% to 10% of total landfill waste. eGreen extends the life of your roof while helping the environment, and you avoid the high costs of tear-off and disposal.

Does this look familiar?

Most leak prevention products are known to aggravate the leak. If this is your roofer's idea of leak repair, then it's time to get a second opinion. Count on us to get your roof repair done right, on time, and on budget. Your roof is no place for target practice!

Temporary Roof Repairs

Here are some examples of typical roof repairs compared to eGreen...

This type of asphalt repair quickly breaks down and pulls away from the roof, breaking the leak proof seal.

This type of seam repair is found often on metal roofs. Unfortunately asphalt patches become dry and brittle and leaks re-appear quickly.

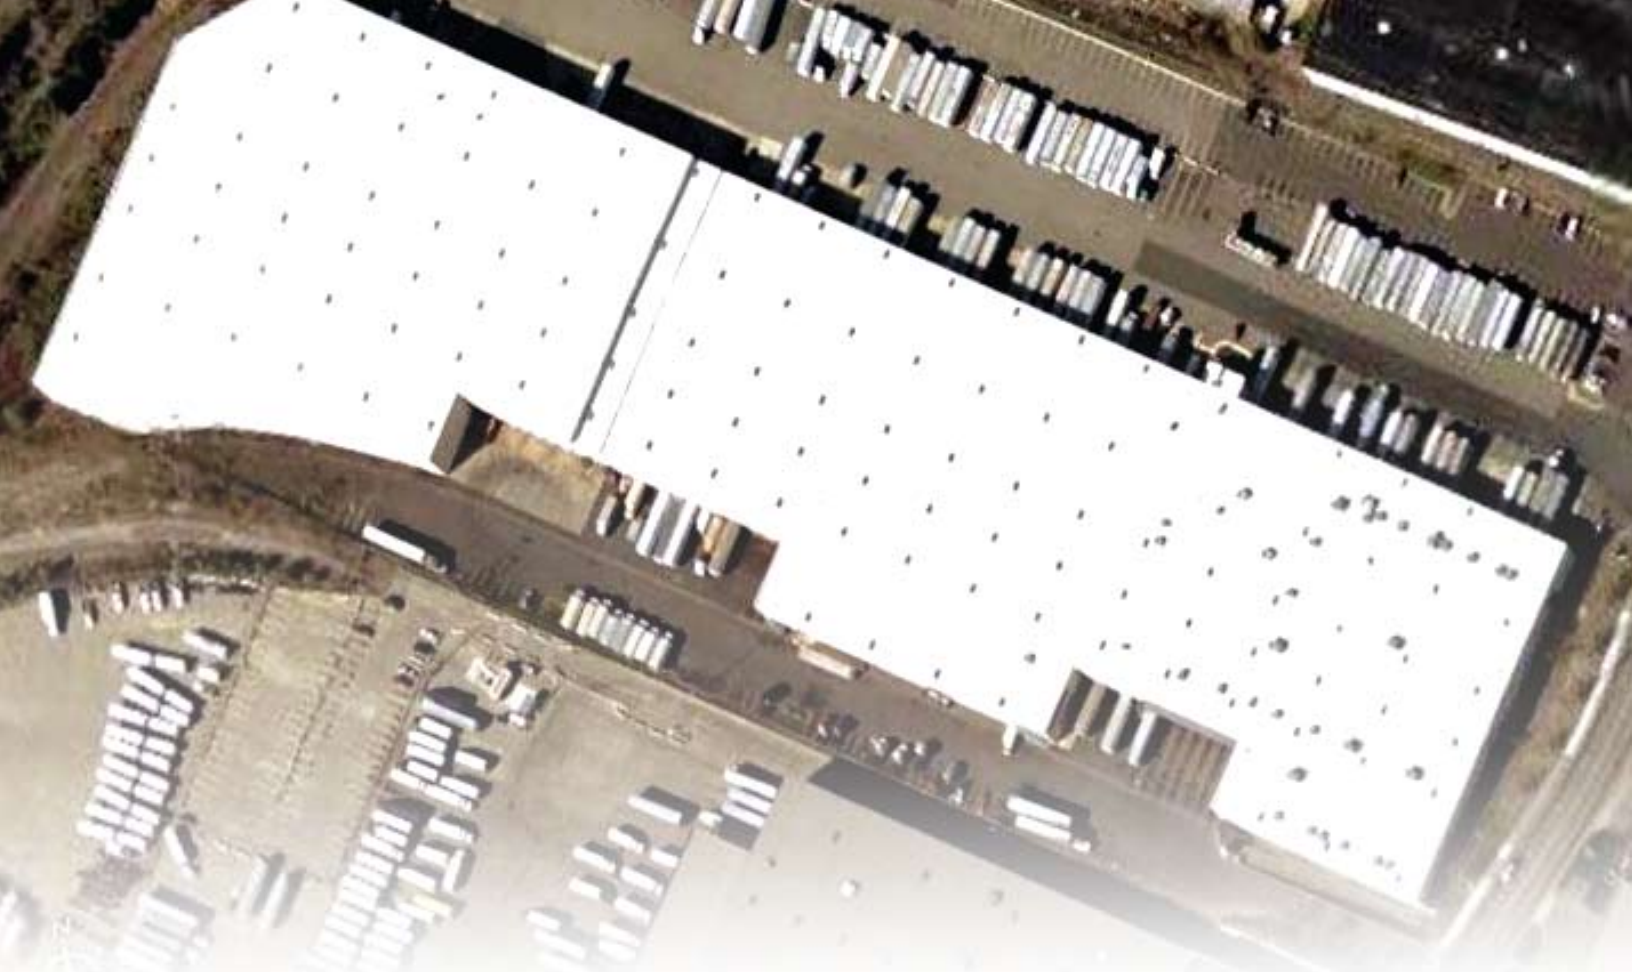

This is a proper repair for metal roof penetrations. The products are very flexible and remain flexible even after curing.

This is a proper repair for a metal roof at overlap seams. The product is flat allowing water to flow freely and remains flexible.

Why go with us?

Roof coating and commercial roofing are two very different industries. Our knowledge and expertise with roof coatings sets us apart from traditional commercial roofing companies. Not all commercial roofing companies can properly install roof coatings.

Anyone can attempt to install these systems, but when it comes to restorations and roof coatings, eGreen delivers. Since completing our first roof coating project in 1993, we continue to specialize in roof coating systems.

With certifications by major roof coating manufacturers and millions of square feet under our belt, put our experience to work for you.
